

CSS Background Properties:

-> CSS background properties are used to control the background of HTML elements like colors, images, positioning, repeating, and sizing.

-> Following are the important background properties:

1. background-color:

-> Used to set the background color of an element.

-> Syntax: background-color: color;

2. background-image:

-> Used to add an image as background.

-> Syntax: background-image: url("path");

3. background-repeat:

-> Controls whether background image repeats or not.

-> By default image repeats.

-> Syntax: background-repeat: repeat (default) | no-repeat | repeat-x | repeat-y;

4. background-position:

-> Used to position background image.

-> Syntax: background-position: horizontal vertical;

-> Most of the time we will use background-position: center;

-> Values

left

right

center

top

bottom

5. background-size:

-> Controls size of background image.

-> Syntax: background-size: auto (default) | cover | contain;

-> cover is mostly used in real projects.

6. background-attachment:

-> It is used to define whether background scrolls or stays fixed.

-> Syntax: scroll (default) | fixed;

7. background:

-> This is shorthand property.

-> Instead of writing all properties separately, we can write in one line.

-> Syntax: background: color image repeat position/size attachment;

-> Example:

```
body{  
    background: lightblue url("nature.jpg") no-repeat center/cover fixed;  
}
```

8. background-clip:

-> The background-clip in CSS is used to decide where the background color or background image should be visible.

-> Syntax: background-clip: border-box(default) | padding-box | content-box;

Special & Popular Usage → Text Gradient

-> background-clip: text

-> It is used to provide background as gradient for the text.

Important Interview Questions:

Q.1 Difference between cover and contain?

-> cover = covers full container, Some image may crop

-> contain = shows full image, No cropping

Q.2 What is shorthand background property?

-> Using multiple background properties in single line.

-> Syntax: background: color image repeat position/size attachment;
