

1. WWW:

-> WWW stands for World Wide Web.

-> The web is a system of interconnected web pages and information that can be accessed using the internet.

2. Web:

-> A web is often called the World Wide Web.

3. Webpage:

-> A webpage is a single document available on the World Wide Web (WWW), and it is created by using HTML.

-> A webpage may contain text, links to other pages, images, audio, and videos, etc.

-> A webpage is a part of a website, which means a website contains more than one webpage.

4. Website:

-> It is a collection of multiple webpages that is called a website.

-> Website contains more than one web page.

5. Web Application:

-> A web application is the collection of multiple webpages, as well as users interacting with those webpages.

OR

-> A web application is a software application that runs in a web browser, where users can interact with multiple web pages over the internet to perform specific tasks.

6. Web Browser:

- > A Browser is an application used to communicate with websites.
- > Only browsers can understand web languages.
- > Different browsers contain different compilers.
- > For Example: Chrome, Microsoft Edge, Mozilla Firefox, Brave, Safari, etc.

7. URL:

- > URL stands for Uniform Resource Locator.
- > It is a part of URI (Uniform Resource Identifier).
- > URL is an address of a resource on the World Wide Web.
- > Structure of a URL:

`https://www.exmaple.com/`

9. Search Engine:

- > A search engine is a web service (tool) that searches the web and shows relevant results based on what you type.
- > Companies use Search Engine Optimization (SEO) to help search engines recognize their websites as highly relevant to particular searches.
- > Example: Google, Bing, Yahoo, etc.

10. Internet:

- > The Internet is a global network of interconnected computers that communicate with each other to share information.
- > It used the standard protocol suite called IP.

11. IP:

-> IP stands for Internet Protocol.

-> An IP is a unique number given to every device connected to the internet.

-> Types of IP Address:

1. IPv4:

-> Most commonly used

-> Format: 4 numbers (0–255)

2. IPv6:

-> New version

-> Longer and supports more devices

12. Server:

-> A server is a computer system that receives requests from clients (browser) and provides the data or services over a network.

-> Compared to a normal computer, it has a higher configuration.

-> For example: Web Servers, Application Servers, Database Servers, File Servers, Mail Servers, etc.

13. Web Server:

-> A web server is a computer system that hosts a website or webpages on the internet.

14. Request:

-> A request is a message sent by the client (browser) to the server asking for a resource or action.

OR

-> A request is a data exchange from the browser (client) to the website (server).

-> Request can be sent in different forms:

1. Typing URL
2. Clicking on the Hyperlink
3. Submitting the Forms -> Login, Register, etc.
4. API calls (very important in React/Node)

15. Response:

-> A response is the data sent by the server back to the client after processing a request.

OR

-> A response is a data exchange from a website (server) to a browser (client).

-> We can get the response in two ways:

1. Static Response -> Fixed content (HTML, CSS)
2. Dynamic Response -> Generated based on user/data (JS)

16. Protocol:

-> A protocol is a set of rules and regulations provided for communication.

-> Browsers mainly use HTTP/HTTPS for web communication.

-> HTTP stands for Hyper Text Transfer Protocol.

-> HTTPS stands for Hyper Text Transfer Protocol Secure (encrypted 🔒).

-> HTTP is used to transfer any type of data:

1. HTML, CSS, JS
2. Images
3. Videos
4. JSON (API's)
