

What is Image Tag?

- > Image tag is used to provide the images in a webpage or website.
- > Images will play a important role in website to make more attractive.

Syntax of Image Tag:

```

```

Here,

src = Source -> You can pass the source of the images

alt = Alternative Option -> It will only accept a text.

- > By default image will take the original resoultion, if we want to control use the width and height attribute inside the image tag.

-> For Ex: ``

How to make image as Hyperlink?

- > We can make image as Hyperlink with the help of anchor tag in HTML.
- > Put the image tag inside the anchor tag it will become hyperlink.
- > For Ex:

```
<a href="">
```

```
<img src="" alt="" />
```

```
</a>
```

How to download the image by clicking on the image?

- > We can download the image just clicking on the image for that we have to wrap the image tag inside the anchor tag and use the download attribute.
- > For Ex:

```
<a href="local_path_for_image" download="new_fileName">
```

```

</a>
```

Here,

href = The path passed in the href for download purpose.

src = The path passed in the src is used to displaying the image on the browser (webpage / website).

What is Figure and Figcaption in HTML?

-> In HTML, <figure> and <figcaption> are semantic elements used to group media (like images, diagrams) with a descriptive caption.

1. <figure> -> The <figure> tag as a container for self-contained content. While most commonly used for images (), it can also hold videos, charts, tables, or code blocks.

2. <figcaption> -> The <figcaption> tag defines it as the tag that provides a caption or legend for its parent <figure>. It must be nested inside a <figure> and can be placed as the first or last child.

-> For Ex:

```
<figure>
  
  <figcaption>Figure 1: The summit of Mount Everest at
sunrise.</figcaption>
</figure>
```
